

### **Beeds Premium Ceramic Paint Treatment**

BEEDS Premium Ceramic Paint Treatment is a high performance coating solution that offers extreme hardness and can be applied to a various surfaces including paint clear coat, plastic, rubber and glass.

BEEDS gives exceptional ceramic-like properties and as such is extremely durable and robust, providing high chemical, UV and heat resistance. It not only increases hardness, it leaves a fantastic deep gloss with remarkable gains in surface thickness.

BEEDS is a complete treatment, instead of just a coating on top of the paint surface, it goes deep into the paint and crystallizes within the pores thus changing the molecular structure of the clear coat. This means the protection is long lasting and hydrophobic performance will last for years not months.

Once the application is fully cured, it forms a permanent bond within the paint. No chemical or solvent can remove it unless the paint surface is wet sanded or intensively polished with harsh rubbing compound.

The durability is very much dependent on the elements from the weather, which varies from countries to countries. With proper care and maintenance, the treatment should last up to 36 months or more.

#### **BEEDS GLASS MAINTENANCE:**

- Mix warm water with ph Neutral soap OR a small amount of skin safe soap.
