

TRANSCAT DOG DOOR

This high-quality small dog door is made from tough polycarbonate plastic and can be installed into glass and other materials. It installs quickly and easily and can fit almost any interior or exterior door, but we do recommend using a tradesman to install the door. With four way locking mechanisms you have full control over your dog to allow it in but not out, out but not in, or fully locked by not letting it go in or out. The door has magnetic catches to restrict the flaps from flapping unnecessarily.

The dog door is ideal for beagles, poodles, terriers and dogs of similar size. If you have a large dog, please check that your dog will fit through the door when fully grown. If you are unsure whether your fully grown dog will be able to fit through the door, we recommend that you make a cardboard template and see if your dog can climb through comfortably.

Ideal for installation into glass

4 way locking

400mm diameter with 250mm down x 285mm across flap

Made in New Zealand

TRANSCAT DOG DOOR

The Transcat Cat Door is found in homes throughout Australasia. It has been on the market for over 30 years. In that time there have been significant improvements, but the door still fits into the same size hole in glass. While it is designed primarily for glass it can also be fitted into other materials.

The Transcat Cat Door is one of the largest cat doors on the market and it is also suitable (as a standard cat door) for miniature dogs. Made from tough, polycarbonate plastic.

The Transcat Cat Door Clear is the ideal product for installation into glass. It is robust, unobtrusive, and easy to clean. The product is proudly designed and manufactured in New Zealand.
